Holdings are subject to change

Portfolio contribution to return and portfolio total return are calculated by FactSet, using market values and are gross of fees and expenses. Due to differences in calculation methodology, these returns may vary from performance derived using net asset values.

1. Portfolio total return is the rate of return from changes in market value (price return) and earned income, such as dividends or coupon payments. Standard portfolio and group level returns are weighted averages of security returns using portfolio beginning weights and are linked daily over the calculation period.

2. Contribution to return is derived by multiplying the beginning weight of a security by its return on a daily basis and compounding this product over time. Portfolio and Sector/Country level contributions are the sums of security-level contributions.

Investment Risks There are risks associated with investing in funds that invest in securities of foreign countries, such as erratic market conditions, economic and political instability and fluctuations in currency exchange rates. Value-based investments are subject to the risk that the broad market may not recognize their intrinsic value.

An investor should read and consider the funds' investment objectives, risks, charges and expenses carefully before investing.
