Objective

The IVA Worldwide Fund will seek long-term growth of capital by investing in a range of securities and asset classes from markets around the world, including the U.S. market.

Fund Highlights

- The fund employs a flexible approach to value investing. This approach may include securities across all asset classes (stocks, bonds, gold and cash) and securities throughout the capitalization spectrum (small, mid, large caps).
- The portfolio management team attempts to mitigate risk by focusing on what can go wrong and striving to avoid bubbles, with an eye towards capital preservation.
- The fund strives to be well-diversified, and never seeks to replicate a benchmark.
- The investment team utilizes in-house, fundamental research conducted by experienced analysts.

[†] The Morningstar Analyst Rating is not a credit or risk rating. It is a subjective evaluation performed by the mutual fund analysts of Morningstar, Inc. Morningstar evaluates funds based on five key pillars, which are process, performance, people, parent and price. Morningstar's analysts use this five pillar evaluation to identify funds they believe are more likely to outperform over the long term on a risk-adjusted basis. Analysts consider numeric and qualitative factors, but the ultimate view on the individual pillars and how they come together is driven by the analyst's overall assessment and overseen by an Analyst Ratings Committee. The approach serves not as a formula but as a robust analytical framework ensuring consistency across Morningstar's global coverage. A fund may receive a Gold rating and still have negative, flat or poor performance.

The Analyst Rating scale ranges from Gold to Negative, with Gold being the highest rating and Negative being the lowest rating. A fund with a "Gold" rating distinguishes itself across the five pillars and has garnered analysts' highest level of conviction. A fund with a "Silver" rating has notable advantages across several, but perhaps not all, of the five pillars-strengths that give the analysts a high level of conviction. A "Bronze" rated fund has advantages that outweigh the disadvantages across the five pillars, with sufficient level of analyst conviction to warrant a positive rating. A fund with a "Neutral" rating isn't seriously flawed across the five pillars, nor does it distinguish itself very positively. A "Negative" rated fund is flawed in at least one, if not more pillars and is considered an inferior offering to its peers. Analyst Ratings are reevaluated every 14 months. For more detailed information about Morningstar's Analyst Rating, including its methodology, please go to <http://corporate.morningstar.com/us/documents/MethodologyDocuments/AnalystRatingforFundsMethodology.pdf>.

The Morningstar Analyst Rating should not be used as the sole basis in evaluating a mutual fund. Morningstar Analyst Ratings involve unknown risks and uncertainties which may cause Morningstar's expectations not to occur or to differ significantly from what we expected.
