Past performance does not guarantee future results. The performance data quoted represents past performance and current returns may be lower or higher. Returns are shown net of fees and expenses and assume reinvestment of dividends and other income. The investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than the original cost. To obtain performance information current to the most recent month-end, please call (866) 941-4482.

Investment Risks

There are risks associated with investing in funds that invest in securities of foreign countries, such as erratic market conditions, economic and political instability and fluctuations in currency exchange rates. Value-based investments are subject to the risk that the broad market may not recognize their intrinsic value.

Effective February 22, 2011, this fund is closed to new investors.

The IVA Worldwide Fund Class A (NAV) ("the Fund") ended the quarter on June 30, 2017 with a return of 2.51% versus the MSCI All Country World Index (Net) ("Index") return of 4.27%, bringing YTD performance to 7.35% versus the Index return of 11.48% for the same period.

Global markets continued to rise this quarter and volatility remained low. The only notable exception came at the end of the quarter when remarks by the European Central Bank and the Bank of England signaled an eventual end to quantitative easing. This, along with recent interest rate rises in the U.S. and "hawkish"; statements by the U.S. Federal Reserve, served as a reminder to markets that the historically accommodative monetary policy buoying global equities may not last forever.

Performance was diluted by the Fund's elevated cash position this quarter. However, our equities outperformed, up 5.4%, compared to those in the Index* which were up 4.3%. This was led by our names in Continental Europe, the United States and South Korea, which contributed a total of 2.5% to performance. A few top 10 names that contributed the most in these regions were Nestle S.A. (Switzerland, Consumer Staples), Oracle Corporation (U.S., Technology) and Samsung (South Korea, Technology). Japan was the greatest detractor, taking away -0.2%. This negative performance was in large part due to Astellas Pharma (Japan, Healthcare), which was the Fund's worst performer for the quarter, detracting -0.3%. Like most other pharma companies, Astellas is facing the challenge of multiple patents expiring within the next 2-3 years. However, we still believe this is a great company that trades at a discount to our intrinsic value estimate. Our names in South Africa and Thailand also detracted from performance, taking away a total of -0.1%.

Fixed income contributed 0.1% to performance this quarter. Our fixed income exposure decreased from 2.5% to 2.4% over the quarter. Our currency hedges detracted -0.02%. Our hedges were unchanged this quarter, remaining at: 40% Australian dollar; 10% euro; 25% Japanese yen; 30% Korean won.

Gold was down -0.5% this quarter and detracted -0.03% from performance. As of June 30, our gold exposure was 5.7%. We continue to believe that gold acts as a prudent hedge in our portfolio against unforeseen extreme market events.

As markets rose this quarter, on top of already stretched valuations, it remained difficult to find undervalued securities. We initiated a new position in Europe, but at the same time trimmed names in multiple regions as prices approached our intrinsic value estimates. Our equity exposure decreased from 50.8% to 50.3% and cash increased from 41.0% to 41.6%.

The elevated cash level of our portfolio is the consequence of the very elevated valuations (and the resulting dearth of genuine bargains) of most financial assets worldwide. Our willingness to hold cash during periods in which we believe that global assets are overvalued is crucial to our investment approach, not only in our efforts to preserve our clients'; capital but to supply us with dry powder when genuine bargains surface.

We appreciate and thank you for your continued support.

* Excludes gold mining stocks

Performance Information (as of June 30, 2017)

Class	Average Annual Total Returns					
	3 Months	YTD	1 Year	3 Year	5 Year	Since Inception**
A (NAV)	2.51%	7.35%	11.92%	2.91%	7.17%	8.70%
